

Ultra-Web® Cartridge Filters Deliver Cleaner Air and Longer Filter Life

INDUSTRY: Metalworking

PROBLEM: Despite filter changeouts every 3 months on an old dust collector, smoke was visible in the plant air.

SOLUTION: Donaldson Torit Ultra-Web filters, inside a new DFO dust collector, now deliver cleaner air! So far the first set of Ultra-Web filters has lasted over a year.

Donaldson Torit Ultra-Web filters are doing twice the job at Ready Machine Tool & Die Corp, and their air quality has improved significantly.

In October 2004, Ready Machine Tool & Die Corp., Connersville, Ind., decided it was time for cleaner air. The dust collector that this stamping and die manufacturer had previously used to filter dust required frequent changeouts -- and still, smoke was visible in the plant.

“Our other collector just wasn’t doing its job and the filters didn’t clean well. It had 16 filters that I kept having to change out every 3 months because they would plug up,” said Lennie Helms, Maintenance Manager.

Ready Machine replaced their old collector with a Donaldson® Torit® Downflo® Oval (DFO 3-12) cartridge dust collector with higher efficiency, longer lasting Ultra-Web® nanofiber filters. The DFO collector has been operating almost around-the-clock for a year without replacement of the first-fit Ultra-Web filters.

“The DFO collector has only 12 Ultra-Web filters and it’s doing twice the job,” said Helms. “The air quality is so much better. You can visibly tell that there is no smoke in our plant now.”

- * 25% fewer filters
- * 400% fewer filter changes
- * Visibly cleaner air in the plant

Ultra-Web!
